NPIC/TDS/D-822-67 1 May 1967

| | | MEMORANDUM FOR: Assistant for Technical Development, NPIC | |
|-----|--------------------|--|-------|
| | | THROUGH : Chief, Development Staff, TDS | |
| | | SUBJECT : Rear Projection Viewer | |
| | | 1. The undersigned attended the contract negotiation at | 25X1 |
| 5X1 | | for the procurement of a Rear Projection Viewer over the period 24-25 April 1967. Attending from and | 25X1 |
| | *** | representing | 25X1 |
| 5X1 | | | 20/(1 |
| 5X1 | | 2. opened the discussion by stating that his understanding of the parties' previous agreements were the following: | |
| | | a. A Fixed Price Supply Contract | |
| | | b. Progress payments of up to 70% of the contract price | |
| | | c. Delivery date of October 1968 | |
| 5X1 | ₹-dsk _. | 3. Immediately stated that was opposed to a supply contract and they denied any previous agreement or understanding that the contract would be a supply type. Even when it was pointed out that their previous contracting officer, who has been reassigned to another division of the Corporation, understood our intentions toward a supply contract and the Corporation had originally proposed on a fixed price basis (which would allow them to retain the design as proprietary), they maintained that this was presently unacceptable to the Corporation for the following reasons: | 25X1 |
| 5X1 | | a. If could not meet the technical specifications after the device was completed they could be defaulted and the Government could hold them liable for all reprocurement costs. Under these circumstances they claim their risk could be unlimited. | |

SUBJECT: Rear Projection Viewer When a "walk away" clause was discussed -- a clause that would still allow the Government to reject a completed instrument that didn't comply with the specifications, but not to hold them liable for reprocurement coststhey rejected it because if the specifications were not met, they would have spent approximately 25X1 could recover nothing. Therefore, even under these conditions, their risk for non-compliance would [25X1 stated that the only acceptable type of contract to would be a supply contract with a modification clause allowing acceptance of an instrument that would substantially perform to the Government's requirements. In other words, if the specifications were substantially met the Agency would have to accept the instrument. Although this is not a "best efforts clause", it does have some similarities in that the Government could not absolutely re quire compliance with the specifications. Even if we were dissatisfied with the first unit, it is conceivable that we could be forced to accept it; however, would still be liable for the unamortized portion of the development -- approximately -which would not be recovered unless they sold additional units. 25X1 An additional consideration which was not discussed with 12 the following: has invested approximately 25X1 into the development of a rear projection viewer for SAC which they have not been able to sell and SAC maintains they have not even requested approval to purchase the instrument. If the circumstances were such that the Air Force refused to purchase the instrument and [25X1 our fixed price substantial performance supply contract, it is possible that they could try to deliver that instrument claiming that is substantially satisfied our requirements. Immediately a dispute would arise because we know that this instrument will not satisfy our requirements, but could always argue that if the instrument satisfies the Air Force requirements. which are related to the same imagery interpreted at MPIC, then the instrument should substantially satisfy our requirement. The burden could then be on MPIC to prove to an impartial board that the instrument would not so satisfy our requirement. Under these circumstances, could recover 25X1 investment and would not have to take the loss of unamortized development costs even though the viewer was unacceptable to NPIC

SUBJECT: Rear Projection Viewer

NPIC/TDS/DS

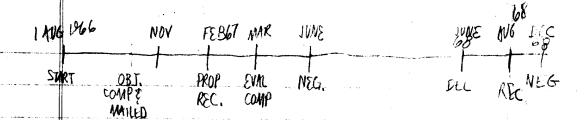

25X1

25X1 If the development was supported on a cost basis, the level of contractual control to assure compliance with the performance specifications would be substantially reduced; therefore, alternative d must be rejected. In all the cost type arrangements considered, the costs incurred by the Contractor must be paid regardless of his achievement, and under this scheme the total development cost is now approximately for the first 25X1 unit. Although this sum will probably be eventially be paid in a fixed price contract, it will be borne by the Government if, and only if, a successful unit is first developed and additional units are procured. This does provide some level of control for the Government. The only alternative remaining assuming that the utilization of this equipment is necessary is alternative e. 25X1 As previously stated, will continue to assume a substantial portion 25X1 of the total risk--approximately It is reason-25X1 able to award the contract on a modified supply basis (with a substantial performance clause) because in most development efforts such as this where the instrument has never been fabricated most contractors will not assume any of the risk of an unsuccessful development. Therefore, it is recommended that a fixed price supply contract with an acceptable qualifying substantial performance clause and a guarantee that NPIC will not receive the previously fabricated SAC viewer in any form whatsoever be negotiated with 25X1 25X1 Development Staff, TDS Distribution: Orig & 1 - Addressee 1 - MPIC/TDS/DS V2 - MPIC/TDS/DS/ESB

In Reply Refer to: T3500-67-261

27 April 1967

Dear Bud:

The purpose of this letter is to summarize the results of our meetings with your representatives at our facilities on April 24th and 25th, and to urge you to reconsider the method of contracting proposed.

Both of our organizations have a substantial investment in this program dating back to your Request for Proposal, 28 October 1965, outlining your development objectives for a new and unique advanced rear projection viewer. Before we allow this investment to be dissipated, we felt it incumbent upon us to present our interpretation of this last meeting, request you to review all of the factors involved and advise us of your position at your earliest convenience. We have been holding a team of professional engineering personnel together to perform this program since completion of the Model 100 screening viewer in February. If, after you have had an opportunity to review this situation, you feel there is no basis for negotiating a mutually acceptable contract, we must begin reassigning these people to other programs effective May 8.

We were unable to negotiate a contract for one basic reason - in addition to the financial risk we are willing to assume by amortizing certain non-recurring costs over the first production procurement, the fixed-price supply contract your procurement group wishes to use requires us to "guarantee" performance on a prototype unit recognized as an item to be developed in your Request for Proposal.

We would like to re-emphasize the following:

1. We intend to meet your specification.

We are a conservative company with an established reputation for supplying quality equipment. We recognize that a satisfactory prototype must be provided that meets your needs before we could hope to recover our investment in the non-recurring costs.

-2-

T3500-67-261 27 April 1967

We know that you recognize the additional financial risk involved in our accepting a supply-type contract for a development program. If we should fail to meet your specification at any point, the unit could be rejected and we could be liable for all costs incurred. This compounds the risk we have previously offered to accept.

2. We stand behind our previous quotation.

We proposed to provide you the prototype unit on a fixed-price basis covering the recurring costs and deferring the non-recurring to be amortized later. We have sufficient confidence in our ability to provide you a viewer that will satisfy your needs that we were, and still are, willing to assume this risk.

| Perhaps we erred in assuming you understood this to mean a fixed-price |
|--|
| R&D contract. To my knowledge, the first time a supply-type contract |
| was mentioned was in the telephone conversation between |
| our Director of Contracts, the week of April 17th. At that time, |
| dvised that we could not accept this type of contract for a |
| development program. |

25X1

This situation must be equally disturbing to you since both of us have invested considerable time and effort during the past 17 months. You are now faced with losing FY '67 money and by the end of next week we will have to reassign the team we have been holding together to perform this task.

This doesn't seem reasonable to us since the present issue really hinges on the meaning of words like "guarantee" and "substantially". We've discussed above what it means to us in the form of financial risk to "guarantee" performance. Let's explore what is meant by the wording that bothers Ed if the contract recognizes the developmental nature of the program. If we "substantially" meet your specification, he is concerned that in effect you could be forced to accept the prototype even though it did not satisfy your needs. Certainly this is subject to interpretation, but we believe it does not take into consideration the incentive we have to provide you a satisfactory product.
